Summary

Detail-oriented Computer Science fresher specialising in AI/ML, with hands-on experience delivering end-to-end data analytics projects using SQL, Python, Power BI, and DAX. Skilled at transforming raw, unstructured datasets into clean, reliable pipelines and translating analytical findings into clear, decision-ready dashboards and reports. Passionate about data storytelling — bridging the gap between complex numbers and the business decisions they should drive.

Education

Kalasalingam Academy of Research and Education

2022 – 2026

Bachelor of Technology in Computer Science and Engineering

Krishnankovil, Tamilnadu

Bhashyam Educational Institutions

2020 – 2022

Intermediate(Mathamatics, Physics, Chemistry)

Guntur, AndhraPradesh

Bhashyam High School

2019 – 2020

SSC

Sattenapalli, AndhraPradesh

Projects

Retail Sales Performance & Growth Analytics Engine | SQL Server, Power BI, DAX, Python

2025

- Engineered advanced SQL Server queries using CTEs, window functions (ROW_NUMBER, RANK), and conditional aggregation to segment and analyse multi-year retail transactional history end-to-end.
- Built memory-optimised DAX architectures in Power BI by restructuring calculated columns into localised RANKX, CALCULATETABLE, and ALLEXCEPT evaluations, significantly reducing in-memory query cache footprint.
- Developed executive-level dashboards tracking Regional Demand Metrics (top-5 revenue items per country), Month-over-Month Growth Trends (2022 vs 2023), and YoY Profitability Vectors with interactive conditional formatting.

Customer Shopping Behaviour Analysis | Python, SQL, Power BI, Pandas, NumPy

2025

- Executed a complete end-to-end analytics workflow — data preparation, SQL querying, Python-based EDA (Pandas, NumPy), Power BI dashboard development, and formal stakeholder reporting — mirroring real-world analyst responsibilities.
- Wrote structured SQL queries for extraction and aggregation; applied Pandas and NumPy for deep-dive EDA including trend identification, anomaly detection, and cohort-level customer segmentation.
- Delivered an interactive Power BI dashboard with dynamic slicers and KPI cards alongside a Business Problem Document and stakeholder-facing presentation, translating raw data into clear retention and conversion insights.

Technical Skills

Programming Languages: Python (Intermediate), Excel (Intermediate), Power BI, SQL, DAX

Developer Tools: VS Code, Google Colab, Anaconda, Git, AI Tools

AI/ML Frameworks: NumPy, Pandas, Sci-kit, PyTorch

Areas of Interest: Dash boarding, AI Integration, Machine Learning, Gen AI, Agentic AI

Languages: Telugu (Native), English (Fluent), Hindi (Basic)

Key Strengths / Achievements

Data Storytelling: Ability to translate complex datasets into clear, structured, and actionable dashboards and reports that non-technical stakeholders can immediately understand and act on

Analytical Problem Solving: Strong instinct for questioning data assumptions, investigating anomalies, and identifying root causes — approaching every dataset like a detective, not a reporter

Strong Fundamentals: Solid hands-on foundation in SQL, Python (Pandas, NumPy), Power BI, DAX, and Excel built through end-to-end project delivery, not just coursework

Fast Learner & Adaptable: Self-taught Power BI DAX optimisation, advanced SQL window functions, and full analytics workflows within a single academic year, with a proven ability to pick up new tools rapidly
